# STEPS TO TAKE IF A FROZEN PIPE BURSTS AT YOUR BUSINESS

In the event that your company experiences water damage from a frozen pipe, use the following checklist to help manage the situation and minimize business interruption.

- 1. SHUT OFF WATER:** Send nonessential employees home for the day and shut off the water main. If there is concern water has reached the fuse box, shut off electricity as well.
- 2. SHUT OFF WATER HEATER:** Shut off water heater after your water main. Water heaters aren't meant to run without water and can cause them to overheat.
- 3. NOTIFY ESSENTIAL CONTACTS:** Contact any emergency contacts, a licensed plumber, any insurance carrier/broker and an Emergency Mitigation Contractor such as SRM - ServiceMaster Recovery Management.
- 4. MINIMIZE ADDITIONAL DAMAGE:** Included in the language of virtually all insurance policies is a disclaimer holding the "insured" accountable for taking steps to help reduce any further damage. SRM - ServiceMaster Recovery Management can help ensure proper steps are taken to mitigate the situation and prevent additional damage.
- 5. EXECUTE A COMMUNICATIONS PLAN:** In addition to those who are part of the recovery process, it will be necessary to inform staff members who will be in charge of internal/external communication to employees, suppliers, customers and other stakeholders as to what is going on and expected next steps.
